

OSMOSE

OPTIMAL SYSTEM-MIX OF FLEXIBILITY
SOLUTIONS FOR EUROPEAN ELECTRICITY

Newsletter #8 - June 2022 -

After four years of collaborative development and demonstration activities across Europe, the OSMOSE project has come to an end in last April 2022. We thank all the partners for their active involvement in this project and the great results obtained, which contribute to a better understanding and implementation of power system flexibility to support the European energy transition.

Project report and key messages now online

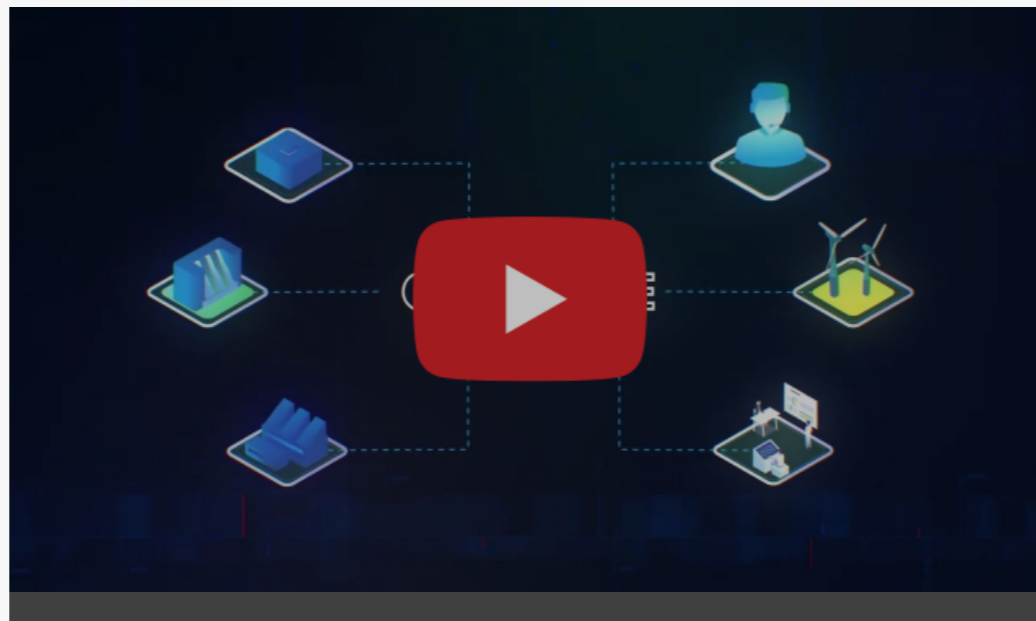

The consortium produced a synthetic but exhaustive report that gives a full overview of the challenges addressed, the work performed, and the main achievements reached by the partners when tackling the vast and complex question of power system flexibility. Two versions are available:

- [Full report](#)
- [Executive summary](#)

We also invite you to browse the [resource center](#) of our website to access the public deliverables and peer-reviewed publications produced by the project.

Project videos

Check out our [Youtube channel](#) to view the different videos of the project, including the presentation of demonstrators, and recordings of our webinars.

Meet us at the upcoming conferences

OSMOSE will be present at the following events in the coming months:

- [INNOGRID Conference 2022](#) organised by ENTSO-E and EDSO
- [International Conference on the European Energy Market 2022](#)

This project has received funding from the Horizon 2020 programme of the European Commission under Grant Agreement n°773406
